Wrapped bearing, $\sigma^2 = 2.5$: fixed (prop) against automatic (auto) split covariances

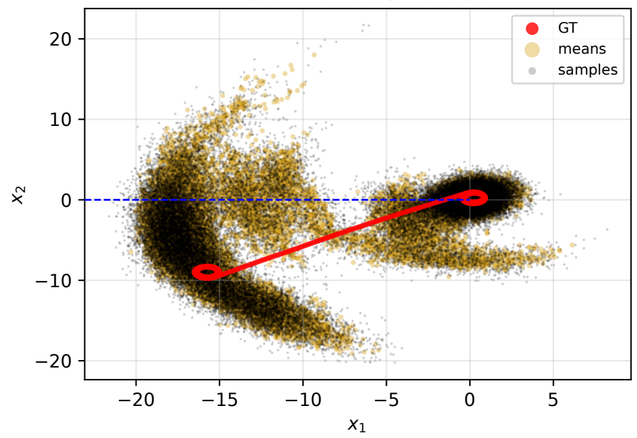

U-AGSF M=100, a=0.05, σ^2=2.5, trial 2
pilot run, prop/prop: MSE 19.8

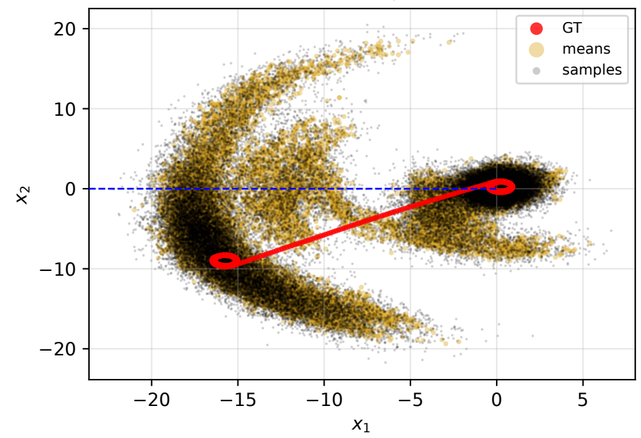

prop/prop, seed 0: MSE 22.2
median rho1 0.90, rho2 0.90

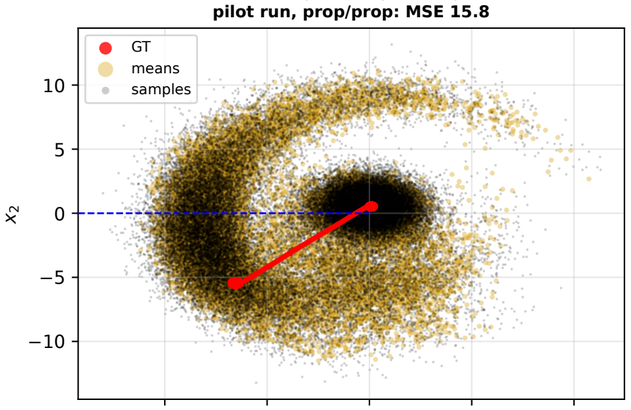

prop/auto, seed 0: MSE 17.3
median rho1 0.90, rho2 0.95

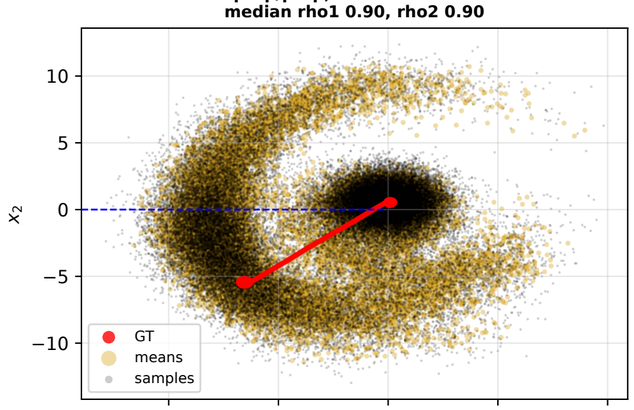

auto/auto, seed 0: MSE 24.1
median rho1 0.95, rho2 0.95

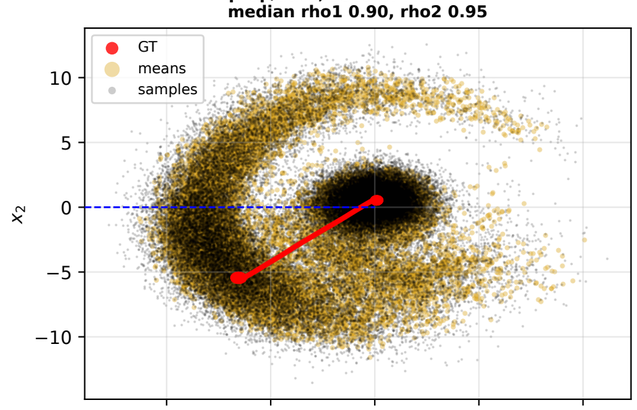

L-AGSF M=100, a=0.05, σ^2=2.5, trial 18
pilot run, prop/prop: MSE 15.8

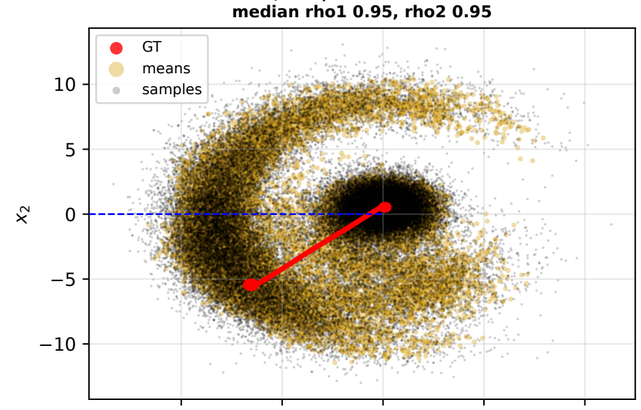

prop/prop, seed 0: MSE 15
median rho1 0.90, rho2 0.90

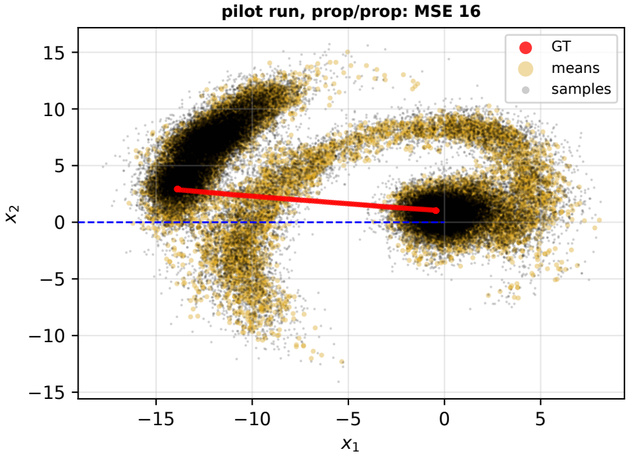

prop/auto, seed 0: MSE 12.5
median rho1 0.90, rho2 0.95

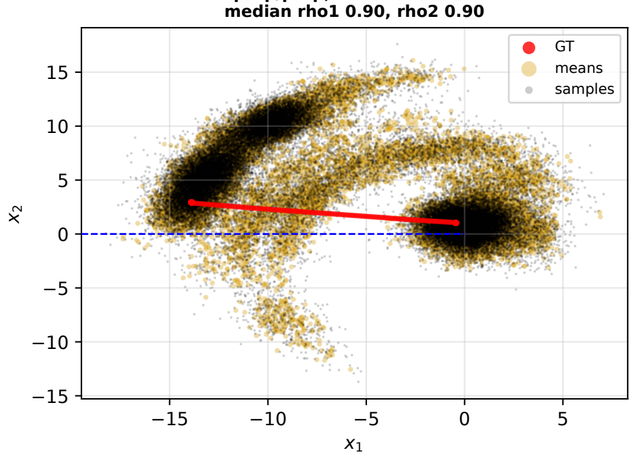

auto/auto, seed 0: MSE 15.9
median rho1 0.95, rho2 0.95

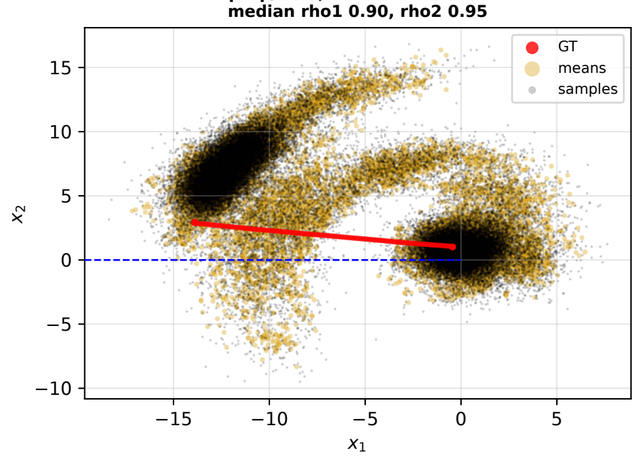

U-AGSF M=100, a=0.5, σ^2=2.5, trial 5
pilot run, prop/prop: MSE 16

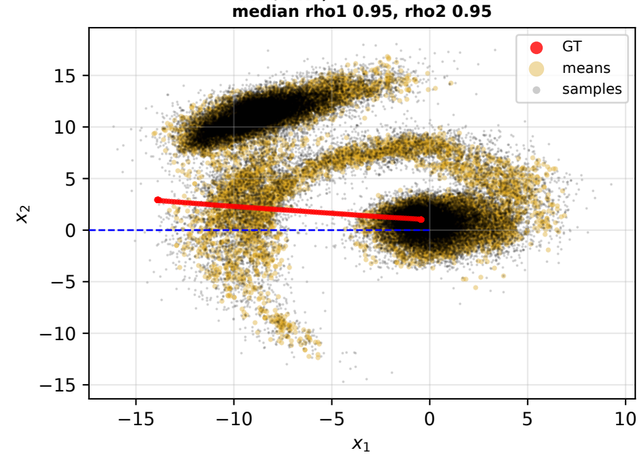

prop/prop, seed 0: MSE 20
median rho1 0.90, rho2 0.90

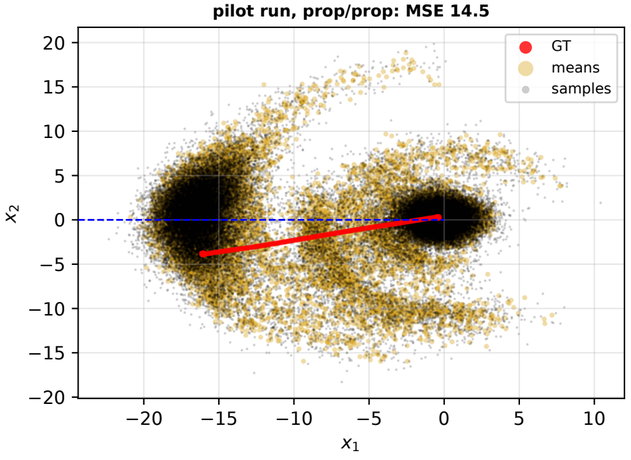

prop/auto, seed 0: MSE 16.3
median rho1 0.90, rho2 0.95

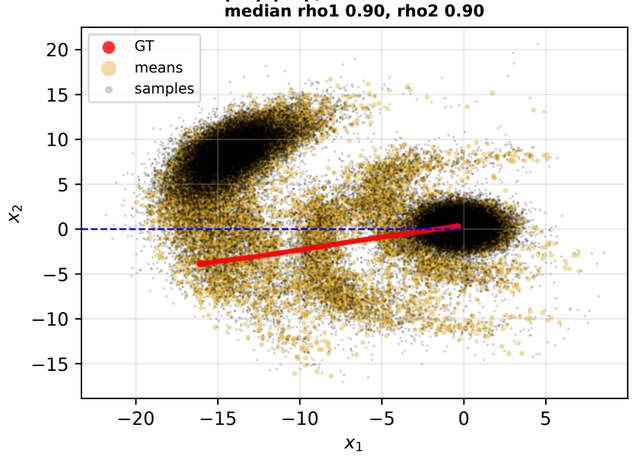

auto/auto, seed 0: MSE 45.8
median rho1 0.95, rho2 0.95

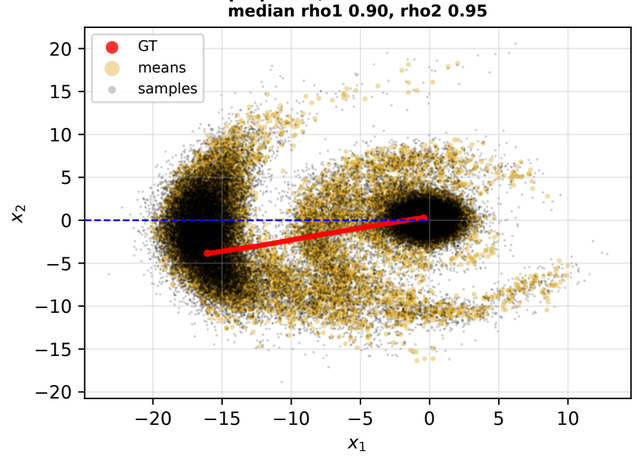

L-AGSF M=100, a=0.5, σ^2=2.5, trial 4
pilot run, prop/prop: MSE 14.5

prop/prop, seed 0: MSE 61.9
median rho1 0.90, rho2 0.90

prop/auto, seed 0: MSE 10.6
median rho1 0.90, rho2 0.95

auto/auto, seed 0: MSE 19.5
median rho1 0.95, rho2 0.95
